

Software developer with 3+ years across systems integration, automation, and QA, plus hands-on full-stack delivery leading a personal production-scale platform (ArtVenture — 74K lines, 48 API routes) end to end. Built Python/Bash automation that replaced manual release workflows at Rafael Advanced Defense Systems, and designed automated QA frameworks for mission-critical deployments. Comfortable owning a problem from database schema to CI/CD to shipped feature.

FEATURED PROJECT

ArtVenture — Full-stack trip-planning platform with a deterministic feasibility engine

2026 · IN ACTIVE DEVELOPMENT

74K	307	48	15	6	152
LINES OF CODE	SOURCE FILES	API ROUTES	DATA MODELS	EXTERNAL APIS	TEST FILES

- **Built a deterministic feasibility engine** that chains ETAs, opening hours, timed-entry bookings, and daylight/sunset windows to verdict each day of a trip GREEN/YELLOW/RED with a specific, explainable reason — by design, not an LLM call, so results are reproducible.
- **Designed a 6-stage data pipeline** (~7,900 lines) that discovers, deduplicates, and enriches places from 6 external sources (OSM, Google Places, Foursquare, TripAdvisor, Wikimedia, Gemini) using confidence-tiered fuzzy matching, then routes uncertain results to human review.
- **Engineered cost and reliability safeguards**, including a quota guardian that hard-stops paid API usage past free-tier budgets, and graceful degradation so a single exhausted source no longer aborts a multi-hour discovery run.
- **Shipped a full commerce layer** (Stripe checkout, purchases, promo codes) on top of the core planner, and led a 3-person team across architecture, database design, and delivery.

Stack — Next.js 16 · React 19 · TypeScript · Tailwind CSS · Prisma 7 · PostgreSQL (Supabase) · Mapbox GL · NextAuth · Stripe · Gemini API

EXPERIENCE

Rafael Advanced Defense Systems

Mar 2022 – Nov 2024

Software Integrator — BNET SDR Project

- Built Python and Bash automation that replaced manual release workflows, turning release notes and versioning into a one-click process.
- Designed automated QA frameworks that improved system validation and reliability across deployments.
- Managed version control and CI/CD via Azure DevOps and Git for a 20-person cross-functional team; bridged Linux/Windows environments via SSH and scripting.
- Delivered on-site international customer support for system deployment, troubleshooting, and training.

Enertech Systems Ltd

2025

Software Developer

- Developed and integrated DLL drivers connecting hardware components to NI TestStand; designed automated hardware test sequences.
- Provided on-site integration and testing support for engineers at Israel Aerospace Industries (IAI).

Israel Defense Forces

Jul 2015 – Mar 2018

Field ICT Operator — Teleprocessing Corps

- Deployed and operated field communication infrastructure, standing up temporary ICT bases for mission-critical connectivity; delivered IT support during operations.

OTHER PROJECTS

Job Hunter Dashboard

Full-stack job-application tracker — FastAPI + MySQL/SQLAlchemy backend, React (Vite) frontend with inline editing and CRUD. Python · FastAPI · MySQL · React

Vehicle Proximity Analysis System

Python system that tracks vehicles across CCTV frames to detect closest-approach moments, with validation tooling for the detection algorithm. Python · Data Processing · Algorithm Design

Serial Port Communication Tester

C# Windows Forms tool for testing serial (COM) device communication via the .NET SerialPort API. C# · .NET · Windows Forms

EDUCATION

Ort Braude College, Karmiel, Israel
Diploma in Practical Software Engineering (Associate Degree equivalent) — Java OOP, SQL, Python, C, Assembly, Networking, Linux, Operating Systems. Led academic project teams across game development (Java, Python) and web/database applications (Angular, PHP, SQL).

SKILLS

Languages — Python, Bash, JavaScript/TypeScript, C#, PHP **Tooling** — Git, Azure DevOps, CI/CD, Test Automation, Linux, SSH
Practices — System Validation, Debugging, Release Management
